

**GREENSTEP™**  
**WASTE SOLUTIONS**  
**FOR YOUR BUSINESS**  
**STEPPING UP TO**  
**SUSTAINABILITY**

Responsible, sustainable  
and cost-effective waste  
management solutions  
for your business.

# OUR GREENSTEP™ SERVICE MAKES YOUR BUSINESS PART OF THE SOLUTION.

## ABOUT OUR GREENSTEP™ SERVICE

GREENSTEP™ service collects your waste and processes it at our AWT (Alternative Waste Technology) facilities, designed to divert rubbish from landfill, which produces harmful greenhouse gases, and instead convert it into valuable resources. GREENSTEP™ is a waste solution for businesses taking responsible action towards reducing their ecological footprint.

## CUSTOMISED SOLUTIONS

We believe there's no "one size fits all" waste management solution. Instead, we look at your how your business operates, what services are already in place and what you need. We then tailor a solution to address the individual needs of your business.

## RELIABLE, CLEAN & RESPONSIVE SERVICE

We operate reliably, cleanly and responsively. We work with you to optimise your service, adapting to changes in your waste management needs, whether they arise from seasonal shifts or changes in your business.

## SIMPLICITY

GREENSTEP™ is a simple one- or two-bin waste solution that makes sure maximum resource is recovered from your waste through both recycling and conversion into valuable products such as green energy and fertiliser.

## SUSTAINABILITY REPORTING – A DIFFERENCE YOU CAN MEASURE

We provide our GREENSTEP™ customers with sustainability reporting, so you can measure how your business is contributing to this climate-friendly solution.

## LIGHT ON THE EARTH, EASY ON THE POCKET

It is getting more expensive to send waste to landfill because of increasing government levies and environmental management costs. By diverting around 70% of your waste through AWT processing, you can reduce your exposure to rising costs. This means that alternative, environmentally responsible recovery and processing options are increasingly becoming the cost-effective choice for waste management.

**Your contribution to the solution is real.** For example, two 240 litre foodwaste-rich bins collected twice a week for one year is an equivalent environmental saving of removing two cars from the road.

## SO WHAT'S AN AWT?

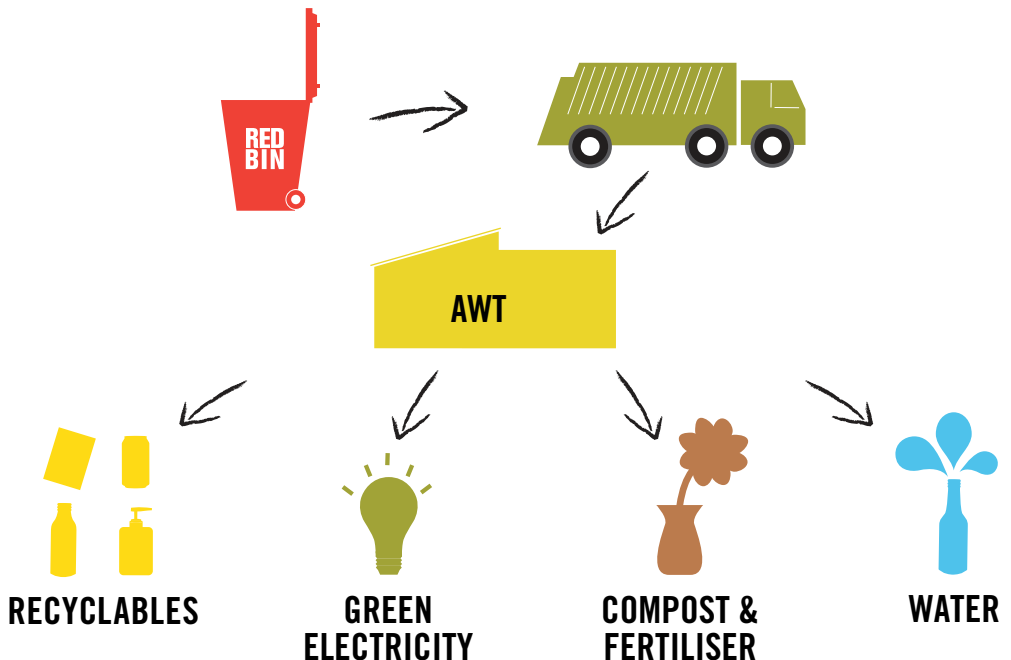

An Alternative Waste Technology (AWT) facility uses technologies and processes designed to deliver positive environmental and community outcomes. WSN's AWT facilities are pioneering sustainable waste management solutions by: producing renewable energy, water, fertiliser and compost; avoiding greenhouse gas emissions; and recovering recyclables.

## LEADING FACILITIES FOR MAXIMUM RESOURCE RECOVERY

GREENSTEP™ customers are guaranteed access to WSN's leading Alternative Waste Technology (AWT) facilities: Eastern Creek UR-3R and the Ecolibrium™ Mixed Waste facility at Macarthur Resource Recovery Park.

## OUR FACILITIES TRANSFORM WASTE INTO VALUABLE RESOURCES & ARE DESIGNED TO DELIVER A RANGE OF ENVIRONMENTAL BENEFITS INCLUDING :

- Diverting around 70% of waste from landfill
- Capturing up to 100% of biogas produced from waste
- Preventing tens of thousands of tonnes of greenhouse gas emissions
- Recovering up to 38,000 tonnes of recyclable materials each year
- Generating surplus green energy to power nearly 4,000 homes
- Producing 55,300 tonnes of compost, mulch and fertiliser

Minimise exposure to rising disposal charges and waste levies with **COST-EFFECTIVE** services

Reduce carbon emissions and **ENVIRONMENTAL** impacts

Receive **SIMPLE**, effective waste solutions tailored for your business

Be a part of a **SUSTAINABLE** solution

## USING GREENSTEP™ :

- Takes up less of your valuable space
- Provides better collection efficiency, saving transport costs as well as environmental impacts
- Requires no extra effort by you

## WHEN YOU USE GREENSTEP™ SERVICES...

You can be confident that maximum value is extracted from waste for reuse and recycling, which brings double the benefit for the environment: recovering resources means reduced waste to landfill as well reduced demand for raw materials.

## ALREADY RECYCLING ?

That's a great start. GREENSTEP™ supports recycling and enables you to step up to the next level of sustainability by collecting all your other waste and converting 70% of it into valuable resources, including renewable energy and water.

## NOT RECYCLING YET?

For businesses not already separating materials for recycling, we can set up a designated recycling system for you or, alternatively, we can recover recyclables from your mixed waste through our processing service.

## Profitable Partnerships

Forward-thinking, responsible businesses  
that use our solutions  
operate in industries including:

- Restaurants, Cafés & Bars
- Clubs & Pubs
- Exhibition and entertainment venues
